AIR SOURCE HEAT PUMP CARE

How often should your heat pump be serviced?

Every 12 months

An annual service keeps your heat pump efficient, keeps your warranty valid and catches small faults before winter. The tricky part is remembering to book it — so let us handle it for you.

? Why every 12 months

- **Keeps efficiency up** — and your running costs down
- **Protects your warranty** — most makers require yearly servicing
- **Prevents breakdowns** — faults caught before the cold hits
- **Longer lifespan** — a cared-for heat pump lasts for years

✓ When to book

- **Late summer / early autumn** — before the heating season
- **Avoid mid-winter** — when your system works hardest
- **New heat pump?** First service at 12 months protects cover
- **Keep the rhythm** — one service every year, on time

Never miss a service — ASHP maintenance plans
